Git& GitHub, Composer, NPM, Postman, LocalStorage, VS Code, Cursor.

Concepts & Architecture:

OOP, SOLID Principles, RESTful APIs, HMVC, Multi-Tenancy (SaaS), Design Patterns, RBAC, Database Transactions.

Soft Skills

Problem-Solving, Time Management, Teamwork, Adaptability

EXPERIENCE

- Backend Developer, Beyonex IT** 

02/2026 – Present
Riyadh, Saudi Arabia

 - **Architecture & Ownership:** Acted as the sole backend developer, managing infrastructure and database design across all projects.
 - **System Integrations:** Developed a comprehensive internal management system with seamless WhatsApp Business API integration.
 - **ERP Refactoring & Compliance:** Optimized the "Qeema ERP" system and currently designing its ZATCA electronic invoicing integration.
- Backend Developer, Brmjia Tech** 

02/2025 – 02/2026
Giza, Egypt

 - Architected and developed scalable RESTful APIs for production systems using **Laravel 11 & 12**.
 - Implemented **Multi-Tenant** structures (SaaS) to support multiple business clients on a shared database, ensuring strict data isolation.
 - utilized **Laravel Modules** architecture to decouple features and improve code maintainability.
 - Optimized database queries and API response times for high-traffic endpoints.
- Web Developer (part time), websolla** 

06/2025 – 08/2025
Cairo, Egypt

 - Developed dynamic admin dashboards and user interfaces using Laravel and Blade templates.
 - Refactored legacy code to adhere to clean code standards and improved admin panel performance.

SELECTED PROJECTS

Bayt-Link (SaaS Property Management System)

- **Role:** Lead Backend Developer
- **Description:** A comprehensive SaaS solution for property management serving owners and residents.
- **Key Contributions:**
- Designed the core database structure for buildings, units, and complex tenant relationships.

- Implemented **RBAC (Role-Based Access Control)** for granular permissions (Admins, Owners, Tenants).
- Built financial modules for rent collection and expense tracking using **Database Transactions** to ensure data integrity.
- Developed real-time features for complaints, online payments, voting on decisions, internal chat, technician directory, notifications, and subscription plans.
- **Tech Stack:** Laravel 12, MySQL, Livewire, RESTful APIs, Clean Architecture.

Faya ERP [↗](#), *(In Progress)*

- **Role:** Backend Developer
- **Description:** A modular multi-tenant ERP system tailored for restaurants and cafés.
- **Key Contributions:**
 - Working on backend development for “Faya ERP”, a modular multi-tenant system for restaurants and cafés.
 - Responsible for implementing new features using Laravel Modules Architecture, designing and improving database workflows, and integrating services between different business domains such as inventory and sales.
 - Focused on performance optimization, clean code practices, and scalable solutions to support multiple tenants within a shared database environment.

Tech Stack: Laravel 11, MySQL, Multi-Tenant Architecture, Modular Development, RESTful APIs

Custom CRM System

- **Role:** Backend Developer
- **Description:** An internal CRM for managing client relationships, contracts, and invoicing.
- **Key Contributions:**
 - Developed an internal Laravel CRM with HMVC architecture.
 - Features included client management, invoicing with email, contract control, user permissions, employee reporting, and attendance API integration.

Tech Stack: Laravel 11 , HMVC.

Online Pay Solution [↗](#)

- **Role:** Backend Developer
- **Key Contributions:**
 - Developed a backend platform that serves as a secure intermediary between users and Fawry services.
 - Users register through an API-based client system and submit verification documents, while admins review and approve accounts through an advanced dashboard.
 - The platform includes automated email notifications and multi-language support.

Tech Stack: Laravel 11, PHP 8.2, MySQL, Sanctum

QeemaERP — Multi-Tenant SaaS ERP [↗](#), *(In Progress)*

- **Role:** Backend Developer (Node.js)
- **Description:** A multi-tenant SaaS ERP system designed to serve multiple business clients on a shared database with strict data isolation, featuring secure JWT-based authentication, role-based access control, and automated tenant onboarding with Chart of Accounts initialization.
- **Tech Stack:** Node.js, Express.js, MySQL, JWT, RESTful APIs, Multi-Tenant SaaS Architecture.

EDUCATION

Bachelor’s Degree in Computer Science, 10/2020 – 07/2024
Faculty of Computers and Artificial Intelligence, Benha University
